2026

project
collection

The 2026 Project Collection is a toolkit crafted for lighting specifiers. Tailored to optimise lighting performance, it features architecturally designed solutions that align perfectly with project requirements. By seamlessly integrating technical innovation with creative vision, we deliver solutions that elevate both interior and exterior spaces.

useful information

GU10/Mini GU10 items

GU10 products are designed to fit a standard GU10 lamp length of 53mm. The specified minimum recess depth dimensions for our products are based on this standard length, ensuring clear installation guidelines. If a product is designed for a longer GU10 lamp length, this will be noted in the key features on the product page.

GU10 lamps are not included.

Mini GU10 lamps, also known as GU10 MR11, share the same lamp cap as standard GU10s. However, mini GU10 lamps have a smaller face diameter of only 35mm, making them ideal for applications requiring a smaller luminaire body.

Mini GU10 lamps are not included but can be purchased separately in a choice of CCT. See pg. 219 for more details.

Dimming

All dimmable products are compatible with mains leading and/or trailing edge dimming. We test all our dimmable products for compatibility with Varilight V-pro dimmer modules. We cannot guarantee the compatibility of other leading / trailing edge dimmers.

Lightsource/Luminaire lumens

Lightsource lumens measure the total light emitted directly from the light source, i.e. the LED PCB, without accounting for any losses due to the fixture's design. Luminaire lumens, on the other hand, measure the total light output from the complete luminaire, including any losses caused by the luminaire body, lenses, reflectors, or diffusers. When the product has a replaceable LED lightsource, the lightsource lumens are quoted on each page.

Colour Rendering Index (CRI)

All products have a minimum CRI >80. CRI>90 products are indicated on the page.

Living finishes

Living finishes change over time. Anodised finishes may appear slightly darker after a period of 3 years due to continued oxidation of the surface of the product.

Warranty

All products are manufactured and inspected in order to meet the technical and quality standards demanded by the market. These come with a standard 5-year warranty out of the box.

We understand that coastal environments can subject products to unique challenges, such as saltwater exposure and extreme weather conditions, our 5-year warranty includes all outdoor products with this icon, when used in locations up to 1km from the coast.

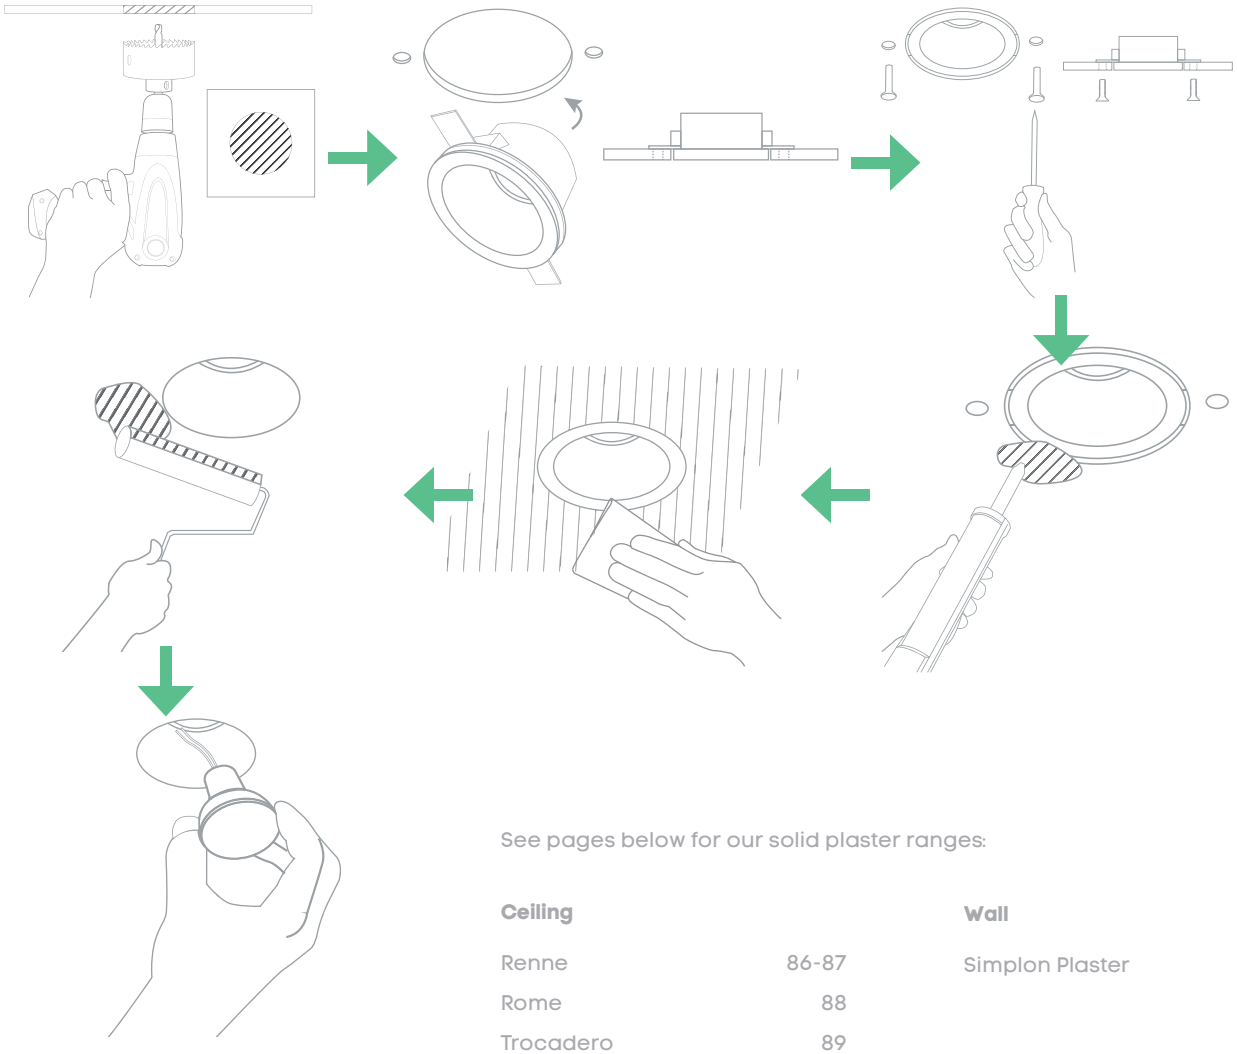
DL-WASH	**36,00 €**

Use solid plaster trimless lighting when ...

you have an already plastered wall or ceiling, and you're not planning to skim the surface again.

After the product installed it is a decorator's job to infill the gap with a flexible filler / caulk, sand to a smooth finish and paint the surface of the ceiling, including the interior of the fitting.

installing solid plaster trimless lighting



See pages below for our solid plaster ranges:

Ceiling

Renne	86-87
Rome	88
Trocadero	89

Wall

Simplon Plaster	90

Use metal trimless lighting when ...

you are installing into a wall or ceiling that has yet to be skimmed, or will be reskimmed.

After the metal frame is installed in the wall or ceiling the plasterer skims the surface with a 3mm layer of plaster skim. The frames have a 3mm lip for the plasterer to skim up to.

installing metal frame trimless lighting

BA-M-ACQUA	**359,04 €**

All bathroom lighting installations must comply to the guidelines set out in Amendment 1 of the 17th edition of the IEE Wiring Regulations (BS7671). The bathroom is divided into zones, with prescribed minimum IP ratings for the light fittings in each zone.

IP rating = Ingress Protection rating.

zone 0

The area inside the bath or shower tray. Fittings must be rated at IPX7 or higher (protected against immersion in water).

zone 1

The area above the bath or shower up to a height of 2.25 metres. Fittings must be rated at IPX5 or higher (protected from jets of water).

zone 2

Covers an area 0.6 metres wide immediately next to, and all around Zone 1. The 60cm area around washbasins should also be treated as zone 2. The minimum rating is IPX4. If there is a likelihood of water jets being used for cleaning purposes in Zone 2, a minimum of IPX5 is required.

outside zone

Covers any area outside Zones 0, 1 and 2. There is no IP requirement in this zone. Bathrooms are allowed to contain a socket outlet, this must be located 3 metres outside Zone 1. Lighting circuits and any socket-outlet circuit in a room containing a bath and/or shower must be provided with 30mA RCD protection.

guide to constant current LEDs

Constant current LED items can be identified because the operating power is quoted in milliamps (mA). Project Collection constant current items are either 350mA or 700mA.

Do I need a separate driver?

Yes, choose a 350mA or 700mA driver to suit the number of fittings you want to run, and whether you want to dim the item. Fittings must be wired in series.

Is this dimmable?

Yes, if used with a dimmable 350mA driver and a compatible dimmer.

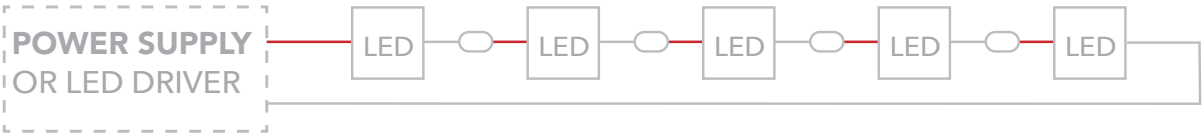
How do I work out which driver I need?

Identify the current, 350mA or 700mA.
Note the wattage of each item, e.g 1W, 3W

item wattage x no. of items = total wattage
select your driver to suit your requirements

How do I wire this?

In series. See the drivers listed below, the product fitting instructions or the drawing below



* NOTE: All these drivers must be wired in series

The driver doesn't fit through the hole / where do I put the driver?

Drivers should be sited somewhere you can access them for maintenance. This can be up to 60m away from the furthest fitting.

The driver will often be larger than the hole cut out for the item. Again, locate it in another place, where you can access it in the future if required

troubleshooting

The first fitting lights up, the others don't come on

You have wired this in parallel (not in series). You will need to buy replacements for all but the first one.
These are not repairable.

All the fittings have failed

This is due to driver failure. Check that you have wired the circuit correctly, or the driver may fail again.

My fittings come on for a while, then they go off, and turn back on by themselves later

Your driver is overheating. Improve the air flow around it.

My fittings are all flashing

Either... Your circuit is wired in parallel. You will need to rectify the wiring and replace the driver. You may need to replace the fittings.
Or... This is a driver issue. Check your driver is not overrun or under-run (i.e. within the minimum and maximum wattages). Otherwise it is a faulty driver.

The first fitting in the circuit stays on after the circuit is turned off

You have residual current in the circuit, or current leakage. Try changing the switch. If these are on a circuit with an intermediate switch it is almost impossible to prevent a small amount of current leakage.

*Living finishes

Living finishes change over time. Anodised finishes may appear slightly darker after a period of 3 years due to continued oxidation of the surface of the product.

Additional information

Any typographical, clerical or other error or omission in any sales literature, quotation, price list, acceptance of offer, invoice or other document or information issued by the Company shall be subject to correction without any liability on the part of the Company. Goods supplied may vary in detail from the illustrations, drawings, measurements and descriptions set out in the Company's sales literature, which are approximate and for guidance only and will not form part of the Contract. Colour finishes will be maintained as accurately as possible but matching cannot be guaranteed. All terminology used in the Company's sales literature is, subject to these Conditions, that as understood by general usage in the trade. For full terms and conditions of sale consult your distributor.
